Queue Mining

The goal of the project is to implement, as library extending the PM4Py library, some features of queue mining which can be useful for conformance checking.

For reference, the following PhD thesis can be used:

http://ie.technion.ac.il/serveng/References/Thesis_Submission_Arik_Senderovich.pdf

The analysis of the features, and the choice of which features should be implemented in the project, is left to the students.
